MBI HEAVY LINE

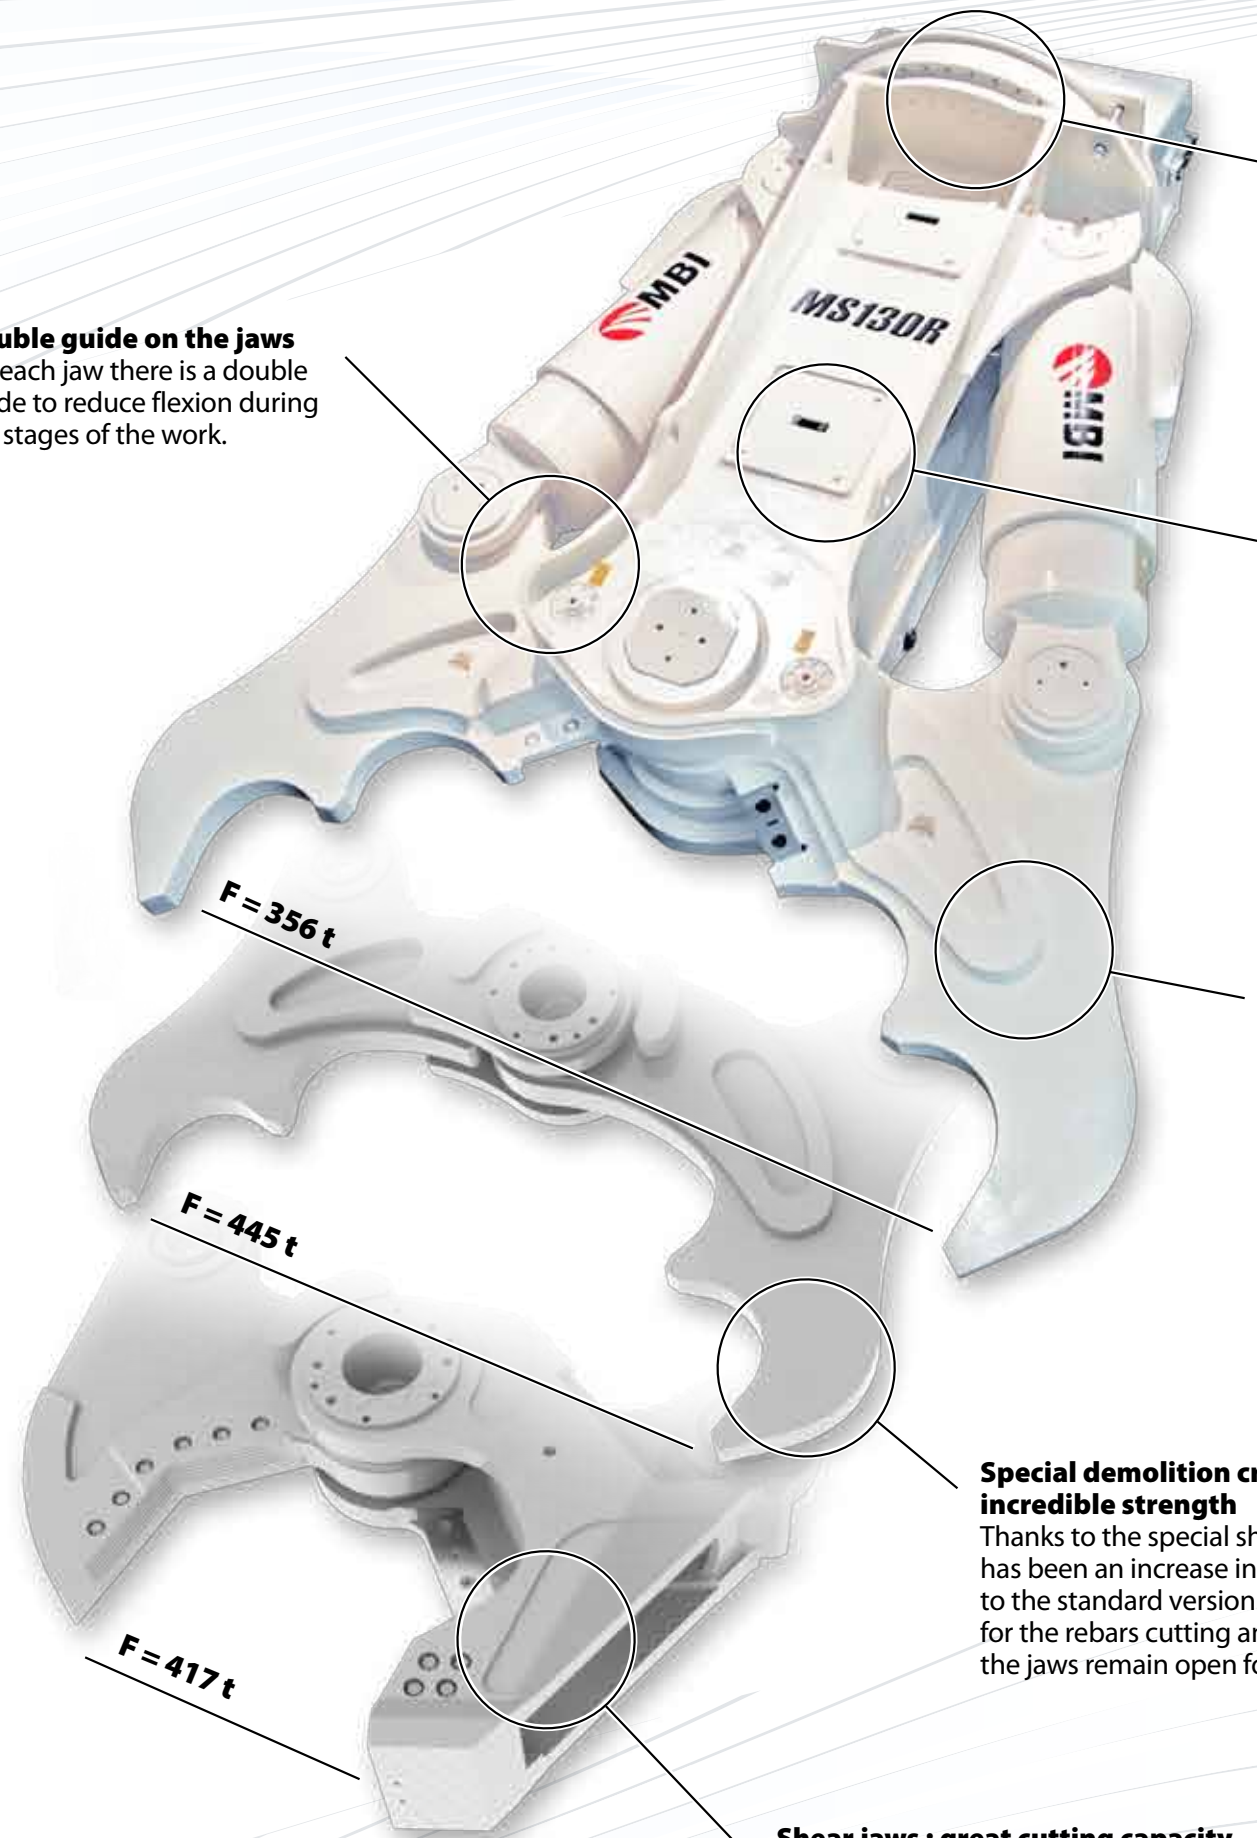

MS130 Multisystem

The MS Multisystem is a versatile product. This attachment consists of a main structure made up of a machine body to which it is possible to add different types of jaws transforming the Multisystem into a specific attachment for the demolition of structures and the cutting of ferrous metals.

Double guide on the jaws
On each jaw there is a double guide to reduce flexion during the stages of the work.

Hydraulic rotation
The sturdy rotation allows accurate positioning of the attachment in any working environment and in complete safety.

Speed valve
The high performance of the cylinders is guaranteed by the presence of a speed valve. In the case of excavators with a high flow rate it is not necessary to use this application.

Demolition crusher jaw: extraordinary opening
The maximum opening of this kit is 2500mm and when closed the teeth close up completely. There are blades for rebars cutting.

Special demolition crusher jaw: incredible strength
Thanks to the special shape of this kit there has been an increase in force of 25% compared to the standard version. There are no blades for the rebars cutting and on closing the jaws remain open for 250 mm.

Shear jaws : great cutting capacity
The experience in the construction of Shears was used for the design of this jaw kit in order to ensure the highest possible performance for an attachment of this category.

We are constantly improving our products and therefore we reserve the right to change the design and technical specifications without prior notice.

TECHNICAL SPECIFICATIONS		
MODEL	MS130	
Excavator Weight	t	120-160
Tool Weight**	kg	14000
Opening Crusher Jaws	mm	2500
Opening Special Crusher Jaws	mm	2300
Opening Shear Jaws	mm	1150
