GR Demolition Grapple

The new range of the GR Demolition Grapples comes from the experience of Mantovanibenne. This line of attachments with its attractive design is characterised by the latest technology. The GR Demolition Grapples have been designed and manufactured for the demolition of structures: in brick, wood and other materials as well as for the selection of demolition debris making recycling more feasible. They can also be widely used for the selection and handling of waste.

High Capacity

The particular design of the jaws was studied to obtain a high capacity ensuring high production of any material and any type of work.

Anti-wear material

The GR Demolition Grapples are built with high wear resistant materials with a hardness of HB 400.

Blades

Each GR Demolition Grapple is supplied with reversible blades. The correct maintenance of these parts allows a high degree of accuracy in handling operations.

Sturdy and compact structure

The GR Demolition Grapples have been designed to ensure a high degree of resistance to stress.

We are constantly improving our products and therefore we reserve the right to change the design and technical specifications without prior notice.
